**TENCEL**

...soft sleeping comfort

# micro TENCEL

Tencel - die Lyocell-fiber of Lenzing is the perfekt fiber for huminidity-management and already has great success in the whole bedding-industry.

The latest development is the Micro-Tencel - a fibre, which is even finer than the regular fibre - 10.000 meters of that fiber weigh less than one gramm.

Due to the higher fineness the surface increases - which helps to absorb humidity even faster and more efficient..

The dry sleeping climate reduces the growth of bacteria and improves your sleep.

Fabrics from STS Textiles with Micro-Tencel are extreme soft and cuddly, flatter you skin and increase well-being.

- dryer sleeping climate
- very soft and cuddly surface
- cool - feel effect
- promote the general sleeping comfort
